NEIGHBORIG SEQUENCE INFORMATION:
The clone sequenced to the left is RP5-866N18, 200 bp overlap; clone sequenced to the right is CTA-343P13, 200 bp overlap. The actual start is unknown, the first known base of overlap is at base position 139224 of RG114A06; actual end is at 53881 of CTA-343P13.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This clone is from the first BAC library from Genome Systems, Inc. (http://www.genomesystems.com).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence was finished as follows unless otherwise noted:

On May 7, 2001 this sequence version replaced gi:13897175.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations.

Where differences are found these are annotated as variations.

Variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with an alternate as manil overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality > 30); an attempt was made to resolve all sequencing problems, such one plasmid subclone or more than one MI3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em; EMBL; SW:;

SWISSPROT; Tr:, TREMBL; WP:, WORNEPP; Information on the WORNEPP http://www.com.edu.

On Aug 21, 2000 this sequence version replaced gi:9856693.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the feature. Low.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human DNA sequence from clone RP11-5N23 on chromosome 10p14-15.3 Contains ESTs, GSSs, STSs and a CpG island. Contains the 5' part of the PRKCQ gene for protein kinase C theta and a novel gene,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PRI 12-OCT-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The following abbreviations are used to associate primary accession
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                IMPORTANT: This sequence is not the entire insert of clone RP11-5N23 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true right end of clone RP11-5N23 is at 132741 in this sequence. The true left end of clone RP11-55478 is at 102011 in this sequence. The true right end of clone RP11-55478 is at 100 in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        http://www.sanger.ac.urk/ROP/Chr10
RP11-5N23 is from the library RPCI-11.1 constructed at the Roswell
Park Cancer Institute by the group of Pieter de Jong. For further

ON NOV 20, 2001 this sequence version replaced gi:15808147.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequences with corresponding to the overlapping clone, as we submit sequences with a mall overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following assembly was recused to associate primary accession numbers given in the feature table with their source databases: Em: EMBL: Sw:, Area, Canner or the WORMPEP! Information or the WORMPEP http://www.earner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.uk.canner.ac.u
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note="Tandem repeat. Human ABC1 genomic DNA.

```
The invention relates to the human ABCI cholesterol transporter protein CC (BB8082) and to nucleic acid sequences (C69120) which encode it. ABCI is a member of the APP-binding cassette (ABC transporter) superfamily of proteins, and plays a crucial role in cholesterol transport, particularly citracellular cholesterol trafficking in monocytes and fibroblasts, being involved in cholesterol trafficking in monocytes and fibroblasts, being involved in cholesterol lefflux from the cell. The gene encoding ABCI is involved in cholesterol efflux from the cell. The gene encoding ABCI is involved in cholesterol efflux from the cell. The gene are associated converted tisease (TD) and familial HDL deficiency (FHA). These diseases of and familial HDL deficiency (FHA). These diseases of and familial HDL deficiency (FHA). These diseases of a autosomal dominant trait. LOW levels of HDL ("good cholesterol") in the blood correlate with a high risk of cardiovascular disease. Darkicularly corromary artery disease, but also cerebrovascular disease. Coronary restenosis, and peripheral vascular disease. Coronary restenosis, and peripheral vascular disease. Cardiovascular disease. The invention provides genetic constructs and transgenic cells and mon-human animals comprising human ABCI nucleic cardiovascular disease comprising the administration of an expression concompasses compounds which minic ABCI expression and methods of sorteening for such compounds. Conformation and cancer correspond and disease compounds which minic ABCI expression and methods of sorteening for such compounds corrected cardiovascular disease, coronary restenosis or peripheral vascular disease, coronary restenosis or peripheral vascular disease, coronary restenosis or peripheral disease. Coronary artery disease associated carebrovascular disease, coronary restenosis or peripheral disease, coronary restenosis or peripheral vascular disease, coronary restenosis or peripheral vascular disease, coronary restenosis or peripheral vascular disease, Huntington's disease
                                                                                                                                                                              New ABC1 polypeptide is useful for treating diseases associated with ABC1 biological activity, e.g. Alzheimer's disease, Huntington's
                                                                           Hayden MR, Wilson AR, Pimstone SN;

diagnosed as having a lower than normal high density of processions in properced. In properced. In the Land of the configuration of a cardiovascular disease, involving administering a compound that modulates LXR- or RXR-mediated transcriptional activity or ABC1 expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition selected a lower than normal HDL cholesterol level, a higher than normal triglyceride level, and a cardiovascular disease. Treating a lower than normal high density lipoprotein-cholesterol (HDL-C) level, a higher than normal triglyceride level, or a cardiovascular disease, by administering a compound that modulates LXR-or RXR-mediated transcriptional activity . The present sequence encodes a human adenosine triphosphate (ATP)
binding cassette protein (ABC) 1 polypeptide. ABC1 resides in cell
commembranes and utilises ATP hydrolysis to transport a wide variety of
substrates across the plasma membrane. ABC1 is a pivotal protein in
the apolipoprotein-mediated mobilisation of intracellular cholesterol
stores, ABC1 is defective in Tangier disease, a genetic disorder
characterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is
localised to chromosome 9422-9431. The ABC1 genes and proteins are
useful for developing pharmaceutical agents for the treatment of heart
disease and other disorders associated with hypercholesterolemia and
atherosclerosis. The genes are useful for developing screening assays to
screen for compounds that regulate the expression of genes associated
with cholesterol transport. The genes and proteins are also useful for
are also useful as diagnostic indicators of cardiovascular disease and
cher disorders associated with hypercholesterolemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Adenosine triphosphate (ATP) binding cassette (ABC) polynucleotide, useful for the development of agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              substrates across the plasma membrane. ABCI is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABCI is defective in Tangier disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABCI gene is localised to chromosome 9422-9431. The ABCI genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0; Gaps

```
The present sequence encodes a human adenosine triphosphate (ATP) binding cassette protein (ABC) 1 polypeptide, and is isolated from a Tangier disease patient. ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the mobilisation of intracellular cholesterol stores. ABC1 is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome pharmaceutical agents for the treatment of heart disease and other metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders associated with hypercholesterolemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Adenosine triphosphate (ATP) binding cassette (ABC) polynucleotide, useful for the development of agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and
Nucleotide sequence of ABC1 polypeptide from Tangier disease patient.
                                                                                                                                                                                                                                                                                                         Human; adenosine triphosphate binding cassette protein 1; ABC1; apolipoprotein-mediated mobilisation; cholesterol; Tangier disease; chromosome 9422-9431; heart disease; hypercholesterolemia; atherosclerosis; cholesterol transport; ss.

The present sequence encodes a human adenosine triphosphate (ATP) binding cassette protein (ABC) 1 polypeptide, and is isolated from a Tangter disease patient. ABC1 resides in cell membranes and utilises ATP pared disease patient, a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tangier disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 9422-9431. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other

ö
disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders associated with hypercholesterolemia.

                  present experient (ABC) I polypeptide, and is isolated from a rangler disease patient. ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotral protein in the apolipoprotein mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in rangiler disease, a genetic disorder characterised by abnormal application of intracellular cholesterol stores. ABC1 is defective in rangiler disease, a genetic disorder characterised by abnormal phot-cholesterol metabolism. The ABC1 gene is localised to chromosome 9422-9431. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol as diagnostic. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          131 agetetggcegetgcettccagggetcccgagccacacgctgggcgtgctgggtgggga 190

The present sequence encodes a human adenosine triphosphate (ATP)

binding cassette protein (ABC) 1 polypeptide, and is isolated from
a Tangier disease patient. ABC1 resides in cell membranes and utilises
a Tangier disease patient. ABC1 resides in cell membranes and utilises
plasma membrane. ABC1 is a pivotal protein in the apolipoprotein-mediated
mobilisation of intracellular cholesterol stores. ABC1 is defective in
Tangier disease, a genetic disorder characterised by abnormal
HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome
plasmacceutical agents for the treatment of heart disease and other
disorders associated with hypercholesterolemia and atheroscierosis. The
genes are useful for developing screening assays to screen for compounds
that regulate the expression of genes associated with cholesterol
c ransport. The genes and proteins are also useful
c still admostic indicators of cardiovascular disease and other disorders

                                                                                                                                                                                                                                                                                                                                                                             The sequence represents the partial coding sequence of human ABC1, which encodes amino acids 1-60 of the human ABC1 protein. The nucleic acid sequence, primers and probes derived from the ABC1 sequence, and polypeptides and vectors are useful for the prevention of atherosclerosis, in a subject affected by a dysfunction in the reverse transport of coholesteroi. The polypeptide encoded by the ABC1 gene is useful for screening for an active ingredient for the prevention or treatment of a disease resulting from dysfunction in the reverse transport of cholesterol. The nucleic acids and polypeptides are also useful for treating and preventing cardiovascular and neurological pathologies, and other diseases e.g. Tangler disease, lecithin-cholesterol (LCAT) deficiency, malaria and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  bone disorder; osteoporosis; vascular growth disorder;

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides. Concleotide of the invention and methods of detecting the nucleotides or polypeptides of the invention. Although novel, many of the bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities; sem cell growth factor activity; hemoretopiesis regulatory activity; tissue growth activity; commondulatory activity; activin- or inhibin-related activities; commondulatory activity; activin- or inhibin-related activities; commondulatory activity; activin- or inhibin-related activities; commondulatory activities, polypeptides or may be not conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include cancers, hematopoietic disorders (e.g., methodic or lymphoid cell disorders), chronic inflammatory conditions (e.g., asthma or arthitis), proliferative retinopathy, atherosclerosis, coronary heart disease, arterial isochemia, bone disorders (e.g., osteoporosis), and abnormal creating infections in addition to immune disorders to muchaic acids encoding them) may be used to promote wound the manipulate stem cells in citture to give rise to neuropeintal and fungal infections in addition to immune disorders to manipulate stem cells in culture to give rise to neuropeintal and fungal infections in addition to immune of insured to a second to a sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a cDNA encoding a
                                                                                                                                                                                                                                                                                                                                                         Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                that can be used to augment or replace cells damaged by illness,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 7086 BP; 1773 A; 1739 C; 1859 G; 1715 T; 0 other;

Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy -

WPI; 2001-476283/51. P-PSDB; AAM79534.

Claim 1; Page 4558-4560; 6221pp; English.

```
ö
The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activinihibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                 inflammation.

Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to four common polymorphisms in the gene encoding ATP-binding cassette transporter-1 (ABC1). ABC1 is associated with decreased ApoA-1 mediated efflux of cholesterol. The polymorphisms in ABC1 directly affects cellular lipid homeostasis, which is a key factor in the atherogenetic processes. The ABC1 polymorphisms are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     diagnosing and treating lipid disorders, cardiovascular diseases diagnosing and treating lipid disorders, cardiovascular diseases (coronary heart disease, atherosclerosis) and inflammatory diseases (psoriasis, lupus erythematosus). The identification of ABC1 as a transporter for interleukin-lbeta (IL-lbeta) identifies this gene as a candidate for treatment of inflammatory diseases including rheumator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     arthritis and septic shock. The present sequence is human ABC1 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New adenosine triphosphate binding cassette transporter-1 gene polymorphisms, useful for diagnosing and treating lipid disorders, cardiovascular diseases and inflammatory diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 7260 BP; 1834 A; 1765 C; 1905 G; 1756 T; 0 other;

The present sequence is that of cDNA encoding the human adenosine triphosphate (ATP) binding cassette transporter 1 (ABC1) protein (see AME0227). The sequence includes an extended open reading frame (ORF) to that provided by the sequence in AAI70314, using an alternative ATG codon as initiation codon and thereby adding an extra 40 Nterminal amino acids to the encoded ABC1 protein (see AME0228). The invention provides 4 common polymorphisms in the ABC1 gene. These were identified by sequencing the ABC1 gene in different Tangier kindreds. In the variant genes (numbering as in different Tangier kindreds. In the variant genes (numbering as in different Tangier kindreds. In the variant genes (numbering as in different Tangier kindreds. In the variant genes (numbering as in different Tangier the amno acid sequence of ABC1 and therefore position 1345, A is changed to G at position 2589 or G is changed to C at position 1345, or any combination of these. All of these polymorphisms alter the amno acid sequence of ABC1 and therefore may affect its function. The 2 most common polymorphisms (G596A) and A2589G and G3456C) are significantly increased in vitro AppA-I mediated efflux of cholesterol from monounclear phagocytes, a catcom catcom and A2589G and G3456C) are significantly increased in a population of eather the and any addition the acid sequence of a population of acid sether the and any addition of the variants (G596A, and A2589G and G3456C) are significantly increased in a population of methalished province and account the acid and account the acid and account the acid and account the acid and account the acid and account the acid and account the acid and account the acid and account the acid and account the acid and account the acid account the acid account the acid account the account the account the account the account the account the account the account the acco

Claim 1; Page 1086-1096; 6221pp; English.

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to sytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication.

The invention relates to the human ABC1 cholesterol transporter protein (B38082) and to nucleic acid sequences (C69120) which encode it. ABC1 is a member of the ATP-binding cassette (ABC transporter) Superfamily of proteins, and plays a crucial role in cholesterol transport, particularly intracellular cholesterol trafficking in monocytes and fibroblasts, being involved in cholesterol efflux from the cell. The gene encoding ABC1 is concerd on chromosome 9931, and mutations in this gene are associated with two genetic HDL (high density lipoprotein) deficiency disorders, think two genetic HDL (high density lipoprotein) deficiency disorders, and istinguishable in that TD is an autosomal recessive disorder, while FHA is inherited as an autosomal dominant trait. Low levels of HDL ("good cholesterol") in the blood correlate with a high risk of cardiovascular disease, particularly coronary artery disease, but also cerebrovascular classase, coronary restenosis, and peripheral vascular disease.

Conversely, a high level of HDL Has protective effects against cardiovascular disease. The invention provides genetic constructs and

ABC1 gene. Human ABC1 proteins disease, cue control proteins and the research transversallar disease, especially coronary artery disease, or prevent cardiovascular disease, especially coronary artery disease, disease. They may also be used in the treatment of diseases associated with ABC1 biological activity, such as Alzheiner's disease, Niemann-Pick disease, Huntingfon's disease, X-linked adrenoleukodystrophy and cancer. The invention specifically excludes proteins with the exact amino acid acid with the exact sequence as GenBank Accession No: CAA10005.1 and X75926, and the nucleic present sequence represents converted as many altered control of a mutant human ABC1 cholesterol transporter associated with an altered disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /note= "the coding sequence continues beyond nucleotide 3341, possibly till position 6860 as identified by translating the present sequence; part of the corresponding protein is missing and nucleotide 3341 corresponds to the last amino acid residue (position 1089) as indicated in the specification.
transgenic cells and non-human animals comprising human ABC1 nucleic acids, and methods of gene therapy for the treatment or prevention of cardiovascular disease comprising the administration of an expression vector encoding ABC1 or an active fragment thereof. The invention also encompasses compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which stimulate ABC1 expression and methods of screening for such compounds. It further relates to methods for determining whether a patient has an increased risk for cardiovascular disease due to polymorphisms in the

The invention relates to a new method for inhibiting cholesterol uptake in the gut that comprises administration of an inhibitor of an ABC1 protein. The method is useful for: lowering levels of LDL (low density lipoprotein) cholesterol by reducing the activity of ABC1 protein in the intestinal cells and the abundance of the ABC1 protein in the individual by inhibiting the activity of the protein; identifying drugs that can lower serum cholesterol and LDL levels comprises assaying the drug to test if it can bind to an ABC1 protein; testing LDL cholesterol lowering agents; and for modulation of ABC1 biological activity. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Treating a lower than normal high density lipoprotein-cholesterol (HDL-C) level, a higher than normal triglyceride level, or a cardiovascular disease, by administering a compound that modulates LXR-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        High density lipoprotein-cholesterol; HDL-C; cardiovascular; ABCl; ss.

The invention relates to the human ABC1 cholesterol transporter protein (B38082) and to nucleic acid sequences (C69120) which encode it. ABC1 is amember of the AFP-binding cassette (ABC transporter) superfamily of proteins, and plays a crucial role in cholesterol transport, particularly intracellular cholesterol trafficking in monocytes and fibroblasts, being

diagnosed as having a lower than normal high density lipoprotein-cholesterol (HDL-C) level, a higher than normal triglyceride level, or a cardiovascular disease, involving administering a compound that modulates LXR- or RXR-mediated transcriptional activity or ABC1 expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition selected a lower than normal HDL cholesterol level, a higher than normal triglyceride level, and a cardiovascular disease.

involved in cholesterol efflux from the cell. The gene encoding ABC1 is located on chromosome 9q31, and mutations in this gene are associated with two genetic HDL (high density lipoprotein) deficiency disorders, can distinguishable in that TD is an autosomal recessive disorder, while are distinguishable in that TD is an autosomal recessive disorder, while cholesterol") in the blood correlate with a high risk of cardiovascular disease, coronary restencists, and peripheral vascular disease. Coronary restencists, and peripheral vascular disease. Coronary restencists, and peripheral vascular disease. Coronary restencists, and peripheral vascular disease. Coronary restencists, and peripheral vascular disease. The invention provides genetic constructs and cardiovascular disease. The invention provides genetic constructs and cardiovascular disease comprising the administration of an expression corompasses compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which mimic activity is compassed risk for cardiovascular disease due to polymorphisms in the increased risk for cardiovascular disease due to polymorphisms in the carebrovascular disease, coronary restenosis or peripheral vascular disease, cerbrovascular disease, coronary restenosis or peripheral vascular disease, coronary restenosis or peripheral vascular disease, sepecially coronary artery disease, with ABC1 biological activity, such as Alzheimer's disease, Nemann-Pick disease, Huntington's disease, X-linked adrenoleukodystrophy and cancer. Che invention specifically excludes proteins with the exact sequence as GenBank Accession No: CANJO005.1 and X75926, and the nucleic certain sequence represents conditions and interned benefits and peripheral and with an altered cholesterol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 transporter associated with an altered cholesterol level and therefore an altered risk of cardiovascular disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human ABC1 cholesterol transporter; chromosome 9931;

The invention relates to the human ABC1 cholesterol transporter protein CC (1898082) and to nucleic acid sequences (C69120) which encode it. ABC1 is a member of the ATP-binding cassette (ABC transporter) superfamily of proteins, and plays a crucial role in cholesterol transports, particularly correctins, and plays a crucial role in cholesterol trafficking in monocytes and fibroblasts, being intracellular cholesterol trafficking in monocytes and fibroblasts, being involved in cholesterol trafficking in the cell in the space encoding ABC1 is corrected on chromosome 9q1, and mutations in this gene are associated with two genetic HDL (high density lipoprotein) deficiency disorders, are distinguishable in that TD is an autosomal recessive disorder, while FH is inherited as an autosomal dominant trait. Low levels of HDL ("good carelate with a high risk of cardiovascular chlease, coronary restences!, and peripheral vascular disease. particularly coronary artery disease, but also cerebrovascular cardiovascular disease. particularly coronary artery disease, but also cerebrovascular cardiovascular disease. Conversely, a high level of HDL has protective effects against cardiovascular disease. Compasses compounds which has protective effects against cardiovascular disease comprising the administration of an expression cardiovascular disease compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which mimic ABC1 activity and methods of screening for such compounds of increased risk for cardiovascular disease, especially ocronary artery disease. Coronary actery disease. They may also be used in the treatment of diseases. They may also be used in the treatment of disease. They may also be used in the treatment of disease. They may also be used in the exact amino activity sequences and GenBank Accession No: CAJONOS: 
                                                                                                                                                                                                                                                                                                               New ABC1 polypeptide is useful for treating diseases associated with ABC1 biological activity, e.g. Alzheimer's disease, Huntington's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               present sequence represents cDNA encoding the human ABC1 cholesterol

New ABC1 polypeptide is useful for treating diseases associated with ABC1 biological activity, e.g. Alzheimer's disease, Huntington's disease and cancer -

Examples; Page -; 229pp; English.

The invention relates to the human ABC1 cholesterol transporter protein (B38082) and to nucleic acid sequences (C69120) which encode it. ABC1 is a member of the ATP-binding cassette (ABC transporter) superfamily of proteins, and plays a crucial role in cholesterol transport, particularly intracellular cholesterol trafficking in monocytes and fibroblasts, being involved in cholesterol efflux from the cell. The gene encoding ABC1 is coveted on chromosome 9931, and mutations in this gene are associated with two genetic HDL (high density lipoprotein) deficiency disorders. Tangier disease (TD) and familial HDL deficiency (FHA). These diseases are distinguishable in that TD is an autosomal recessive disorder, while FHA is inherited as an autosomal dominant trait. Low levels of HDL ("good disease, particularly coronary artery disease, but also cerebrovascular disease, coronary restenosis, and peripheral vascular disease.

Conversely, a high level of HDL has protective effects against transcent of the area protective effects against and the area of the area of the area of the area of the area of the area o cerebrovascular disease, coronary restenosis or peripheral vascular disease. They may also be used in the treatment of diseases associated with ABC1 biological activity, such as Alzheimer's disease, Niemann-Pick disease, Huntington's disease, X-linked adrenoleukodystrophy and cancer. The invention specifically excludes proteins with the exact mano acid sequences of Genbank Accession No: CAAJ10005.1 and X75926, and the nucleic acid with the exact sequence as GenBank Accession No: The provides of Carolina and the nucleic acid with the exact sequence as GenBank Accession No: AJ012376.1. The transgenic cells and non-human animals comprising human AEC1 nucleic acids, and methods of gene therapy for the treatment or prevention of cardiovascular disease comprising the administration of an expression vector encoding ABC1 or an active fragment thereof. The invention also encompasses compounds which mimic ABC1 activity, compounds which stimulate ABC1 expression and methods of screening for such compounds. It further relates to methods for determining whether a patient has an increased risk for cardiovascular disease due to polymorphisms in the ABC1 gene. Human ABC1 proteins and nucleotides can be used to treat or prevent cardiovascular disease, especially coronary artery disease,

```
The invention relates to the human ABC1 cholesterol transporter protein (B38082) and to nucleic acid sequences (C69120) which encode it. ABC1 is a member of the ATP-binding cassette (ABC transporter) superfamily of proteins, and plays a crucial role in cholesterol transport, particularly intracellular cholesterol trafficking in monocytes and fibroblasts, being involved in cholesterol efflux from the cell. The gene encoding ABC1 is located on chromosome 9931, and mutations in this gene are associated with two genetic HDL (high density lipoprotein) deficiency disorders, Tangier disease (TD) and familial HDL deficiency (FHA). These diseases
                                                                                                                                                                                                                     ;
0
present sequence represents CDNA encoding a mutant human ABC1 cholesterol transporter associated with an altered cholesterol level and therefore an altered risk of carditovascular disease.

Note: The present sequence is not shown in the specification, but is derived from the native human ABC1 cDNA shown on pages 157-160.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human ABC1 cholesterol transporter; chromosome 9q31;

are distinguishable in that TD is an autosomal recessive disorder, while CC FHA is inherited as an autosomal dominant trait. Low levels of HDL ("good cholesterol") in the blood correlate with a high risk of cardiovascular disease, particularly coronary artery disease, but also crebrovascular disease, particularly coronary artery disease, but also crebrovascular disease.

CC conversely, a high level of HDL has protective effects against transpenic cells and non-human animals comprising human ABC1 nucleic cardiovascular disease. The invention provides genetic constructs and transpenic cells and non-human animals comprising human ABC1 nucleic acids, and methods of gene therapy for the treatment or prevention of cardiovascular disease comprising the administration of an expression compounds which mimic ABC1 activity, compounds which mimic ABC1 activity, compounds which are relates to methods of screening for such compounds. It further relates to methods for determining whether a patient has an increased risk for cardiovascular disease due to polymorphisms in the ABC1 gene. Human ABC1 proteins and nucleotides can be used to treat or prevent cardiovascular disease, especially coronary artery disease, coronary restences of peripheral vascular disease, muth ABC1 biological activity, such as Alzheimer's disease, Niemann-Pick disease. Humington's disease, X-linked adrenoleukodystrophy and cancer. Corebrovascular disease, X-linked adrenoleukodystrophy and the nucleic can be invention specifically excludes proteins with the exact amino acid sequences of GenBank Accession No: CAAl0005.1 and X75926, and the nucleic can expression no more an invention a mitant human aguine as GenBank Accession No: AD012376.1. The procession accept sequence as GenBank Accession No: AD012376.1. The procession and animal additional activity and animal additional activity and animal additional activity and animal additional activity and animal additional activity and animal additional activity and animal additional activity and animal additionaly

The invention relates to the human ABCI cholesterol transporter protein (183802) and to nucleic acid sequences (C69120) which encode it. ABCI is a member of the APP-binding cassette (ABC transporter) superfamily of proteins, and plays a crucial role in cholesterol transport, particularly corrections, and plays a crucial role in cholesterol transports, particularly conversed in cholesterol trafficking in monocytes and fibroblasts being involved in cholesterol efflux from the cell. The gene encoding ABCI is involved in cholesterol efflux from the cell. The gene encoding ABCI is involved in cholesterol efflux from the cell. The gene encoding ABCI is involved in cholesterol and familial HDL deficiency (FHA). These discases confloates (TD) and familial HDL deficiency (FHA). These discases confloates (TD) and familial HDL deficiency (FHA). These discases confloates practiced with a high risk of cardiovascular chisease, particularly coronary artery disease, but also cerebrovascular disease, coronary restenosis, and peripheral vascular disease. Conversely, a high level of HDL has protective effects against cardiovascular disease. The invention provides genetic constructs and cardiovascular disease. The invention provides genetic constructs and cardiovascular disease compounds which mained administration of an expression cardiovascular disease compounds which mained administration of an expression compounds which mained administration of an expression of the encompasses compounds which mained administration of an expression of increased risk for cardiovascular disease, especially coronary arestenosis or peripheral vascular disease, coronary restenosis and be used in the treatment of disease. They may also be used 
                                                                                                                                                                                                                      New ABC1 polypeptide is useful for treating diseases associated with ABC1 blological activity, e.g. Alzheimer's disease, Huntington's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note: The present sequence is not shown in the specification, but is derived from the native human ABC1 cDNA shown on pages 157-160.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    16.8%; Score 60; DB 21; Length 7864;

The sequence represents the coding sequence #1 of human ABC1. The nucleic acid sequence, primers and probes derived from the ABC1 sequence, and polypeptides and vectors are useful for the prevention of atherosclerosis, in a subject affected by a dysfunction in the reverse transport of cholesterol. The polypeptide encoded by the ABC1 gene is useful for screening for an active ingredient for the prevention or treatment of a disease resulting from dysfunction in the reverse transport of cholesterol. The nucleic acids and polypeptides are also useful for treating and preventing cardiovascular and neurological mathorics and other and neurological mathorics.
                                                                                                                                                                                                                                                                                                                                                                                                          s M, Arnould-Reguigne I, Prades C, Naudin L,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence represents the coding sequence #2 of human ABC1. The nucleic acid sequence, primers and probes derived from the ABC1 sequence, and polypeptides and vectors are useful for the prevention of atherosclerosis, in a subject affected by a dysfunction in the reverse transport of cholesterol. The polypeptide encoded by the ABC1 gene is useful for screening for an active ingredient for the prevention or treatment of a disease resulting from dysfunction in the reverse transport of cholesterol. The nucleic acids and polypeptides are also useful for treatming and preventing ardiovascular and neurological pathologies, and other diseases e.g. Tangier disease, lecithin-cholesterol (LCAT) deficiency, malaria and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    detection; diagnosis; antisense therapy; gene therapy; ss.

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oilgo-dr primer and an oilgonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oilgonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oilgonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 1'-end sequence of the combination of the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also weeful for the full-length cDNAs are primers allow obtaining of the full-length cDNAs represent human cDNA sequences; AAH13629 to AAH13629 to AAH13629 to AAH13632 represent human anino acid sequences; and AAH13629 to AAH13632 consequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   High density lipoprotein-cholesterol; HDL-C; cardiovascular; ABC1; ds.

The present invention relates to a method for treating a patient diagnosed as having a lower than normal high density ilpoprotean-cholesterol (HDL-C) level, a higher than normal triglyceride level, or a cardiovascular disease, involving administering a compound that modulates LXR- or RXR-mediated transcriptional activity or ABG1 expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition selected a lower than normal HDL cholesterol level, a higher than normal triglyceride level, and a cardiovascular disease.
                                                                                                                                                                                                                                                        Treating a lower than normal high density lipoprotein-cholesterol (HDL-0) level, a higher than normal triglyceride level, or a cardiovascular disease, by administering a compound that modulates LXR-or RXR-mediated transcriptional activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       High density lipoprotein-cholesterol; HDL-C; cardiovascular; ABC1; ds.

                                                                                                                               The present invention relates to a method for treating a patient diagnosed as having a lower than normal high density lipoprotein-cholesterol (HDL-C) level, a higher than normal triglyceride level, or a cardiovascular disease, involving administering a compound that modulates LXR- or RXR-mediated transcriptional activity or ABC1 expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition selected a lower than normal HDL cholesterol level, a higher than normal triglyceride level, and a cardiovascular disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of genomic DNA encoding novel human conversity lipoprotein binding protein 2 (LBP-2, see AAB82806).

The DNA was isolated from a human genomic library by screening with LBP-2 bundleic acids are among claimed plane spans 5 exons. Human LBP-2 nucleic acids are among claimed polynucleotides of the invention that encode novel polypeptides, termed LBPs, capable of inding to native and methylated LDL. Also claimed are isolated LBP propeptides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk con atherosclerosis, methods for treating an agent for use in abnormality in structure or metabolism of LBP are claimed.

The properties of the methods for treating a cell having an abnormality in structure or metabolism of LBP are claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated low density lipoprotein binding polypeptide for treating, diagnosing and/or identifying therapeutic agents for atherosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human BMP-4 5' upstream gene sequence with exon 1-3 PCR primer #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; bone morphogenetic protein 4; BMP-4; promoter; cartilage;

```
molecular weight compounds and their expression of immune ner-q. The molecular weight compounds and their derivatives have morphogenetic activity and inhibiting activity for bone and cartilage through the expression of human BMP-q, and are useful as preventative or therapeutic expression of human BMP-q, and are useful as preventative or therapeutic general construction of steohyperplassia, and as remedies for osteometastas. The compounds are also useful in the fields of orthopaedic surgery (fracture, osteoarthritis such as joint and hip joint osteoarthritis, arthrosteids, damage of cartilage such as damage of meniscus, regeneration of bone and cartilage deficit caused by injury and tumour dissection, bone reconstruction such as spinal cone diseases such as dysoteogenesis and achondroplasia); or dental fields (bone reconstruction such as palatoschisis, mandible ceconstruction, and residual ridge construction) and osteoporosis. The compounds may also be used for bone graft in aesthetic surgery. The compounds also have application in the veterinary field. Those compounds therewer, of home are all and an expression and contention and horse.
                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a PCR primer for the 5' upstream gene sequence including the exon 1 through exon 3 regions of human bone morphogenetic protein 4 (BMP-4). This region of DNA and a reporter gene can be introduced into a host cell, and used to identify low molecular weight compounds which regulate the expression of human BMP-4. The low
                                                                                                                                                                                                                                                                                                   .ow molecular weight compounds which regulate the expression of BMP-4
                                                                                                                                                                                                                                                                               Human bone morphogenetic protein 4 (BMP-4) promoter used to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA sequence from the promoter region upstream of the See2a gene #2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Senescence; transgenic plant; promoter; transcription initiation; plant development; fruit ripening; protease inhibitor; pesticide; silage proteolysis inhibition; See2a; ds.

This invention relates to a promoter or transcriptional initiation region of a plant genome that is capable of modifying gene expression during plant material senescence. Plant senescence is the sequence of during plant material senescence. Plant senescence is the sequence of blochemical and physiological events comprising the final stage of plant development. The promoter or a DNA construct containing the promoter is useful for modifying gene expression during senescence, for delaying senescence characteristics, and for modifying the expression of strong also be used for the expression of antisense or senes protease sequences, dataying fruit ripening, enhancing senescence characteristics of plant material, modifying expression of at least 1 plant growth regulator, for transforming plant material with a transgene under the control of the promoter of modifying expression of a protease inhibitor, pesticidal comporter, for modifying expression of at least 1 chemical product gene. The promoter and DNA construct are also useful for producing a plant material having modified gene expression during senescence, and for the expression of pesticidal compounds during senescence, and for the expression of pesticidal compounds during senescence, and for the expression of a producing a plant material having modified gene expression during senescence, and for the expression of pesticidal compounds during senescence, and for the expression of a producing a plant material having modified gene expression during senescence, and for the expression of pesticidal compounds during senescence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the promoter or a construct containing it. The present sequence represents a second variant of DNA from the promoter region upstream of the senescence-enhanced See2a gene isolated from Zea mays. This sequence
                                                                                                                                                                                                                                                    modification of gene expression during senescence of plant material and for modifying expression of protease inhibitors and pesticidal genes -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a human bone morphogenetic protein-4 promoter (BMP-4) region 1. The invention provides a method for the identification of therapeutic agents for use in the prevention and/or treatment of osteoporosis. The method involves introducing two expression vectors into a host cell. The first expression vector comprises of a BMP-4 promoter region 1 or 2 (AAV32784) which is operably linked to a reporter gene, e.g. BMP-4 gene. The second expression vector comprises of a DNA encoding an estrogen receptor. The host cell is then contacted with the compounds being being tested for therapeutic activity. Compounds which bind and form a complex with the estrogen receptor, to gain entry into the cell, and then induce the expression of the reporter gene, through the BMP-4 promoter region, are potential therapeutic candidates. By this method, the antitumour agent ICII64384 was shown to be an effective therapeutic agent. Unlike oestrogens currently used to treat osteopoxosis, the therapeutic agents are claimed not to have an increment in the risk of developing breast or endometrial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The sequences given in AAQ32850-56 encode bone morphogenetic proteins (BMP). BMP's increase bone growth and when used in conjunction with vitamin D the level of new bone growth is greater than when a BMP or vitamin D are used alone. The BMP's are administered for systemic treatment at a dose range of 1pg to 100 microg. BMP are active as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

mammal. The method comprises administering a bone morphogenetic protein in combination with a vitamin D compound, where: (a) the bone morphogenetic protein is BMP-2 and is administered in an amount of 500-1000 ng in combination with about 6 ng vitamin D compound; or (b) the bone morphogenetic protein is BMP-4 and is administered in an amount of about 62.5 ng in combination with about 6 ng vitamin D compound. The present sequence encodes BMP-4. The method is used for treating bone defects or disorders, e.g. fractures, surgical lesions, periodontal disease, osteoporosis, arthritis and rickets.
                                                                                                                                                                                                                 Gaps

                                                       The osteogenic protein when in association with a matrix can induce at the locus of an implant the full development cascade of endochodraal bone formation including vascularisation, mineralisation and bone marrow differentiation. The osteogenic protein can also be used to repair both bone and cartilage in the treatment of osteoarthritis.
                                                                                                                                                                                                                                                                                                                                                                                               Prepro human CBMP2B; cartilage and endochondrial bone formation; allograft repair; osteoarthritis; non-union fracture repair; osteogenesis; periodontal, dental and craniofacial reconstruction;
                                                                                                                                                                                                      ö
New pure mammalian osteogenic proteins – induce cartilage and endochondral bone formation when in association with a matrix
                                                                                                                                                                           6.2%; Score 22; DB 14; Length 1788;

                                                                                                     AAQ72710 encodes AAR51654 prepro human CBMP2B, fragments of the related protein CBMP3 (AAR51642) consisting of residues 93-109 and 77-83 are uniglycosylated osteogenic polyeptides. These polypeptides can be disulphide bonded to form a dimer, which forms an essential in a biodegradable matrix which can be implanted into a mammalian bone marrow cavity, here it can induce local cartilage, bone and endochondrial bone formation; and it can also accelerate allograft repair. This implant has the advantage of inducing all stages of bone formation and of having a higher specific activity than other known biosynthetic materials. The implant can be used to repair non-union fractures and cartilage; treat osteoarthritis; and aid
                                                                                                                                                                                                                                                                                                                     ;

The sequences given in Antonous Library and partial sequence of CBMP3. These proteins, CBMP2B and the partial sequence of CBMP3. These proteins have true osteogenic activity when properly folded and dimerised. CBMP2B and CBMP2A may form a heterodimer with mature hop-1. These proteins contain a conserved six or seven cysteine skeleton in their active regions. Probes based on this region have been used in the solution of further osteogenic protein family members. Fragments of these proteins can be used in the production of dimeric peptides which may be used in the generation of antibodies with binding specificities for osteogenic proteins. The antibodies with binding specificities for osteogenic proteins. The antibodies with binding specificative specifically to an epitope of the osteogenic protein and may be used in purification protocols. Osteogenic proteins, such as these, may be used in an implantable osteogenic device which allows predictable bone in an implantable osteogenic device which allows predictable bone formation correct acquired and congenital cranôferial and other skeletal or dental anomalies. They may be used to induce local endochrondral bone formation in non-union fractures and in other clinical applications including dental and periodontal applications where bone formation is required. Other potential applications including certain of protein applications including certain of protein applications including certain of protein applications include carfilage repair, e.g. in the treatment of osteoarthritis. This sequence was repair, e.g. in the breatment of osteoarthrities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antibodies with osteogenic protein binding specificity - used in purification of osteogenic proteins, and as antigenic proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; osteogenic protein; subunit; endochondral bone formation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequences given in AAT02601-03 encodes the human osteogenic

```
The present sequence encodes a human osteogenic protein, which is used in the present invention. The present invention describes methods for selectively extracting an osteogenic protein (OP) from a mixture. The method comprises: (a) exposing the mixture to an antibody that specifically binds OP, separating the resulting antibody-protein complex from the mixture, and dissociating the complex. In the methods OP comprises a pair of oxidised subunits that are disulphide-bonded to form a dimer, and one of the subunits has an amino acid (aa) sequence sufficiently homologous to residues 335-431 of a 431 aa protein designated OPS, sequence given in the specification. In dimeric form OP is capable of inducing cartilage and endochondral bone formation in a mammal when disposed within a matrix implanted in the mammal. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Extraction of osteogenic protein from mixture - using antibodies specific for novel polypeptide chains useful as subunit(s) of dimeric osteogenic protein(s)
                                                                                                                                                                                                                                                                                                                                                                                                                                   Kuberasampath T, Oppermann H, Ozkaynak E, Pang RHL;

The device is used as an allogenic or xenogenic implant for the induction endochondral bone formation in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Implant for mammals permitting the influx, proliferation and differentiation of migratory progenitor cells, useful for inducing endochondral bone formation in mammals -

The present invention describes isolated DNA (I) encoding at least one osteogenically active region of human osteogenic protein-1 in prepro form (OP1-PP), murine OP2-PP or human OP2-PP. Also described are: (A) DNA related to (I) encoding a polypeptide able to form dimers that can induce cartilage and endochondral bone formation in a mammal when implanted in a matrix; (B) vectors containing (I) or related DNA; (C) host cells transformed with this vector; (D) DNA (I) encoding a prepro- or pro-OP1, and related vectors and transformed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acid encoding mammalian osteogenic proteins in prepro form - able to induce cartilage and bone formation when implanted in matrix, useful for repairing bone defects

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polypeptide (II) sequences. (II) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical
mammalian cells, able to induce bone and cartilage formation; (F) mature opt secreted from mammalian cells following expression of the sequence that encodes hoPl-PP; and (G) production of an active osteogenic composition by truncating mature opl protein. Host cells of (C) are used to produce proteins able to induce cartilage and bone formation, e.g. for correction of acquired or congenital craniofacial defects or other skeletal or dental disorders; to heal non-union fractures; to repair cartilage, e.g. in osteoarthritis, or generally wherever bone formation is required. The proteins induce complete development of endochondral bone, including vascularisation, mineralisation and bone marrow differentiation. The present sequence encodes human CBMP2B.
                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder: ss.

imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and amino acid sequences. AAS641954 represent novel human lagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fitp.wipo.int/pub/published_pct_sequences.

The HindIII-SacI bovine genomic bBMP-2 fragment described in AAN80627 is subcloned into M13, labelled and used as probe to screen polyadenylated RNAs from various cells and tissue sources.
Sequence analysis of the weakly hybridising recombinants hBMP-2 class II (-BMP-4) indicated that they are quite homologous with the sequence given in AAN80622 at the end of their coding regions, but less so in
                                                                                                     This cDNA sequence encodes the human bone morphogenic protein (BMP) 2B. Oligonucleotide probes were synthesised based on a partially sequenced BMP-2B protein isolated from ground bowine powder. The probes were used to screen a bowine liver DNA library to obtain the BMP-2B encoding DNA sequence. The DNA was used to screen a U-2 OS human cell line cDNA library to obtain this human BMP-2B cDNA. BMPs can be used to induce bone and cartilage formation, and in wound healing and tissue repair. They can also be used for treating periodontal disease or osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Bone morphogenic protein; hBMP-2 class II; probes; cartilage formation; bone formation; osteogenic cpds; prodontal disease; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence was obtd. from clone lambda U2OS-3 (ATCC 40342) which was isolated from a cDNA library prepd. using human cell line U-2 OS RNA. It is one of two classes of clones isolated distinguished by hybridisation characteristics. This class, designated hBMP-2B (previously BMP-4 and BMP-2 Class II) hybridised only weakly with the probe which was derived from the bovine BMP-2A sequence, and showed only partial homology with that sequence. The second class, hBMP-2A (previously BMP-2 and BMP-2 class I) hybridised strongly and was much more homologous. The gene prod. is an oseteoinductive protein useful for inducing bone/cartilage repair, wound healing and tissue repair. Typical applications include healing of
                           Human cDNA hBMP-2 class II contains an opem reading frame of 1224 bp, encoding a protein of 408 amino acids. The protein is preceded by a 5' untranslated region of 394 bp with stop codons in all frames, and contains a 3' untranslate dregion of 308 bp following the in-frame stop codon. The 8 bp region preceding this 5' untranslated region represents a linker used in the cDNA cloning procedures. See also AAN80619-N80636 and AAN81963-64.
                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New DNA sequences encoding osteo-inductive protein - useful for stimulating bone and cartilage re formation e.g. for wound healing and tissue repair.

Sequence analysis of strongly hybridising clones designated hBMP-2A (previously designated BMP-2 and BMP-2 Class I) indicated that they have extensive homology with the partial bovine BMP-2A sequence; weakly hybridising clones were designated hBMP-2B (previously designated BMP-4 and BMP-2 Class II) and sequence

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/447,570
FILING DATE: 21-FEB-1992
CLASSIFICATION: 536
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GENERAL INFORMATION:
APPLICANT: OPPERMANN HERMANN
APPLICANT: OZKAYNAK, ENGIN
APPLICANT: WIBERASAMPATH, THANGAVEL
APPLICANT: RUBERASAMPATH, THANGAVEL
APPLICANT: RUBERASAMPATH, THANGAVEL
APPLICANT: PANG, ROY H.L.
TITLE OF INVENTION: OSTEOGENIC DEVICES
NUMBER OF SEQUENCES: 33
CORRESPONDENCE ADDRESS:
ADDRESSEE: TESTA, HURWITZ & THIBEAULT
STREET: 53 STATE STREET
CITY: BOSTON
                 REFERENCE/DOCKET NUMBER: CRP-001CP6
TELECOMMUNICATION INFORMATION:
TELEPHONE: 617/248-7000
TELEFAX: 617/248-7100
INFORMATION FOR SEQ ID NO: 6: SEQUENCE CHARACTERISTICS:
LENGTH: 1788 base pairs
TYPE: nucleic acid
TYPE: nucleic acid
STRANDEDNESS: single
